### ATLAS Synopsis

ATLAS (Audit Trail Lifting Application Service) is an add-on application for use with X\_TRADER® that stores traders' Audit Trail messages into a centralized database. ATLAS runs as a service on each trader's machine and passes batches of Audit Trail messages to the ATLAS Server. The ATLAS Server then inserts this data into a database so it can be retrieved easily at any future date.

### Key Features

- Retrieves and stores Audit Trail messages for an entire firm of traders in a centralized database
- Runs continuously, every day, all day long
- Information can quickly and easily be retrieved by querying the SQL database
- Augments the information stored via Trade Tracker by including all of the actions/messages that never reach a gateway
- Audit Trail messages are encrypted during transmission to ensure security
- Configurable setup to maximize performance
- Client installation package that can be pre-configured with connection details before deployment is also available

**Requirements:** Trade Tracker (Server)  
SQL Server 7.0/2000 (Server)  
.NET Framework 1.1 (Server and Client)  
X\_TRADER 6.10 or greater (Client)

**Suitable Market:** Risk Administrator
