Position Mover Synopsis

Position Mover is an X_TRADER® Pro plug-in application that generates Start of Day (SOD) records to transfer traders' positions automatically every day. Positions for different products on the same exchange can be moved at different times to coincide with the various opening times for each product. Position Mover can calculate SOD records based on traders' X_TRADER positions or based on a file from an external source.

Key Features

- Configure what time positions are captured and published for each product
- Include/exclude certain traders from capturing/publishing SOD records
- Create SOD records based on internally calculated positions using the exchange published settlement price or create SOD records from a back office position file
- Option to receive email notifications when positions are captured and published, or if there are discrepancies between the back office file and internally calculated positions
- Ability to view all traders' current positions and current SOD records in real time
- Easily view log files for all captures and publishes

ID	Capture	Publish	Exchanges	Products	Traders	Log	Settings	Delete	Status
<input checked="" type="checkbox"/> CBOT	2:00 PM	7:15 AM	CBOT	*	****				Waiting for event time.
