SOD Setup Synopsis

SOD (Start of Day) Setup is a plug-in application for X_TRADER® Pro that will enter a fill at the start of each business day, at the prior business day's closing price, for the quantity that the applicable trader left open. It distributes two sets of data via batch files. First, if a trader maintained a position overnight, the SOD Setup application provides that information to the trader at the start of the next trading day. Second, the SOD Setup application provides the data that may alter a trader's available credit limit based on the prior day's trading. Most organizations use the SOD Setup application to update a trader's start of day position.

Key Features

- Can be run manually from a command line or as a scheduled task
- Reads from individual or multiple files
- Inserts trader's SOD positions and updates trader's credit limits.
- Runs batch files at user-defined times to link with back office systems
- Links with GMI, Rolfe & Nolan, Ubitrade and Memphis back office systems
- Uses Guardian to validate data

Suitable Market: Traders and Risk Administrators
