Trade Marshal Synopsis

Trade Marshal is an X_TRADER® Pro plug-in application for the risk administrator and trader. It aggregates order data from a firm or group of traders and broadcasts the data in real time to the firm or group of traders via TT's Price Injector tool. The data then shows up on each client's Market Gateway through a TTSIM gateway. If desired, the broadcast data may be filtered by order type or trader to include and/or exclude certain data. Since Trade Marshal is a server-side application, it can be set up with a scheduler tool to run automatically without human interaction.

Key Features

- Lists all working orders that meet a filter criterion and aggregates orders at a given price
- Drag and drop products from the Market Grid to activate contracts within Trade Marshal
- Broadcasts total quantity at each price level to a TTSIM gateway
- Price broadcasts are viewable within the X_TRADER Market Grid
- Can monitor up to 20 different products at a time
- Filter data by account to exclude groups, individual traders, subsets of traders or order sources from the data broadcast
- Expired contracts automatically roll over to the next available quarter
- Automatically detects unique fills for each exchange even if many gateway flavors exist

Active	Product	Broadcast Product Level 1	Broadcast Product Level 2	Broadcast Product Level 3	Depth:	Info:
