### AC/DC Synopsis

AC/DC (AutoCover & Delete Contracts) is an X\_TRADER® Pro plug-in application for a risk administrator or trader. It covers orders when filled and deletes resting orders submitted based on predetermined rules that match the filter criterion. AC/DC allows access to unlimited futures contracts. When AC/DC is started, it launches the last saved configuration. If no configuration was saved, the application will wait for new contracts to be dropped into the application. Contracts can be dragged and dropped from X\_TRADER's Market Explorer window to the AC/DC application. Within each contract, three choices are displayed: Product, which is the entry product, Cover Product, which is the contract for which a cover order will be placed when the entry product is filled, and Delete Delay, which is the amount of time elapsed before deleting all orders for the entry product.

### Key Features

- Drag and drop contracts from the Market Explorer window
- Order Source will listen to orders from Autospreader®, Autotrader™, X\_TRADER API and/or X\_TRADER
- Display up to ten contracts at a time; scroll to view additional contracts
- Use a master switch to turn functionality on or off on a contract-by-contract basis
- Filter orders by trader and account
- Drop-down list enables trader to submit each cover order by customer
- Supports limit and market orders
- Price and Quantity Multipliers for products that trade at different price levels or in different trading units
