Navigator Synopsis

Navigator is a plug-in application for X_TRADER® Pro that allows a trader to display two contracts' bids and offers side-by-side. Traders can submit market, limit, stop market, stop limit and "entry-style" OCO (One-Cancels-Other) orders on either of the two contracts. Navigator also can route orders to the best market based on rules created by the trader during setup.

Key Features

- Display two tradable contracts side-by-side for easy comparison
- Price Ratios and Offsets normalize contract prices for display and order routing functionality
- Quantity Multipliers to accurately route orders on contracts that trade in different units
- Route to the best market based on pre-defined rules and re-route changed orders
- Enter OCO orders made up of either two stops, two limits or a stop and a limit where the stops can be trailing
- Enter virtual market, limit, stop and OCO orders held locally on the client machine until triggered by a price and quantity threshold
- Dynamically update the right-click quantity through a spreadsheet link
- Order Pane to view and adjust details of all orders at a price level
- Presents more granular prices on contracts with a smaller tick size
- Status bar displays last user actions
- Quantity Pad in discreet or detached mode optimizes screen real estate
- Option to display only the two contracts or only the contracts' combined values
